# DEVICE42

Hybrid IT Discovery, Infrastructure and Inventory Management

BENEFITS

- ✓ **Reduce MTTR and improve infrastructure Service Delivery**
- ✓ **Simplify upgrades, audits, and IT budgeting**
- ✓ **Accelerate cloud migration**

As IT infrastructure grows, companies struggle to keep up with the ever-increasing complexity. Manual approaches to tracking assets such as spreadsheets quickly break down when that IT estate grows beyond even a small size and continue to fail as the infrastructure grows to include multiple locations and cloud assets. Yet this information is critical for running the modern enterprise. Using Device42, IT teams can increase visibility and agility, while lowering Mean-time-to-resolution (MTTR) – all from a single dashboard. Device42 Core includes:

Infrastructure Discovery
Automated discovery maps your entire IT infrastructure, including buildings, rooms, racks, devices (physical & virtual) and other IT assets.

ITAM / CMDB
Get a clear view into your IT ecosystem to identify, manage, and verify all configuration items (CI) in your environment with Device42's integrated ITAM/CMDB. Powerful inventory management tracks the entire lifecycle of assets.

Data Center Infrastructure Management (DCIM)
Accurately model the physical datacenter including buildings, rooms, and racks, plus create reports & leverage powerful visualizations.

IP Address Management (IPAM)
Easily track and provision IP addresses, VLANs, subnets, and MAC addresses.

Device42 Core: Hybrid IT Discovery, Infrastructure and Inventory Management

Warranty & Service Contract Management

Discover, track, and manage warranty & service contract lifecycles. Warranty expiration dates and other details can be pulled automatically from Dell, HP, Lenovo, and IBM, automatically!

Password / Secret Management

Track and manage passwords in a centralized, encrypted storage vault.

Cable Management

Track, manage, and visualize patch panel and switch port connections for the timely and accurate resolution of support issues.

Integrations

Integrates with most ITSM tools like ServiceNow, Jira Service Desk, and Freshservice. RESTful APIs and webhooks simplify custom integrations.

Additional benefits

- Rapid implementation
- World-class support
- Easily integrate with existing IT tools using RESTful API's and app connectors

Need to go beyond Core capabilities?

Device42 offers a selection of tiered add-on modules, each of which adds a new level of functionality that builds upon the one before it. As needs change or when new functionality is required, simply add a new module to enable more advanced Device42 features:

- Application Dependency Mapping (ADM)
- Software License Management (SLM)
- Resource Utilization (RU)
- Power and Environmental Monitoring
- Netflow add-on for App Mapping (requires SLM)

Experience Device42 for Yourself

See why hundreds of companies in more than 60 countries around the globe are using Device42 to manage their IT infrastructure.
